Residential and Commercial Building Designed for the Tropics

WITH A NEW METHOD OF BUILDING, GREEN DWELLINGS specializes in the creation of green homes & commercial use properties designed for eco-conscious buyers. Unlike the old way of site construction that is wasteful and very time consuming, their modular homes are built in a controlled factory facility over a 3 month period, and installed on your property in just one day. Using this method of construction is faster, more efficient with improved quality control at a much better price.

With designs that employ the most innovative, state of the art energy-saving techniques and using only recycled and renewable materials, this new philosophy of building focuses on reduced energy consumption. Designed for the tropical/sub-tropical environment, Green Dwellings sets out to create a beautiful, contemporary, healthy living space while reducing waste and the carbon footprint. The solid construction of steel and concrete with high-impact windows meet the highest hurricane standard, and all Homes are LEED Platinum Certifiable (Leadership in Energy and Environmental Design).
